CAUTION: Operation of combustion equipment can be hazardous resulting in bodily injury or equipment damage. Each burner should be supervised by a combustion safeguard and only qualified personnel should install, make system adjustments and perform any required service.

BURNERS
INFRA-RED CERAMIC

DESCRIPTION
The IRC-1 Infra-Red Ceramic Burners are designed to deliver high intensity radiation. The radiation surface is entirely ceramic. No metal parts are exposed in the radiation zone.

IRC-1 Burners utilize most clean gaseous fuels with conventional mixing systems in the 8-16 ounce air pressure range.

Spark and flame rod mountings are available to insure positive ignition and flame supervision.

The IRC-1 Burners are applicable to many types of heat processes. The simple, flexible design lends itself to a wide range of mounting and manifolding patterns.

Individual adjusting valves are available for special heat patterns.

APPLICATIONS
- Ceramic tile curing and glazing
- Core drying
- Radiation convection systems
- Food processing
- Textile ovens
- Paint, plastics drying & curing
- Glass heat treating & polishing
- Mold & die heating
- Paper drying
- Plastic vacuum forming
- Metal heat treating

FEATURES
- High efficiency
- Simple modular design
- All ceramic face
- Rugged cast iron body
- Easy maintenance
- Stable flame in high drafts
- High turn down
- 2000°F surface temperature
- Flexible mounting patterns

GENERAL DIMENSIONS

ORDERING INFORMATION
1. Number of Burners
2. Type of Manifolding, if any.
3. Type of Gas to be used.
4. Pilot or Direct Spark Ignition.
5. Type of Flame Supervision.
